Sierra Monitor Announces their New BACnet Router with a Special Introductory Price

April 2, 2019

Milpitas, California, April 02, 2019 (GLOBE NEWSWIRE) -- Sierra Monitor Corporation launched their new FieldServer products at AHR 2019 with a new look and next-generation performance. The new FieldServer is 22% smaller than the classic design while quadrupling CPU performance and memory. The industry-standard DIN-rail mounted form-factor supports four unique building automation tools - one of them being the FieldServer BACnet Router. To celebrate the launch of the new product, Sierra Monitor Corporation has partnered up with their participating distributors to give their customers a special introductory price for the new BACnet Router.

FieldServer BACnet Router

The **BACnet Router** is a staple of building automation networks. It comes with 2 serial ports, as well as a Wi-Fi version. The BTL-certified product includes a powerful Explorer function which, when combined with the Cloud-based Remote Access, saves integrators time and money through remote diagnostic capabilities.

"Chipkin has been distributing and supporting SMC FieldServer products for nearly 20 years. Although SMC's products have always been top notch, the new line of BACnet Routers really raises the industry bar. They are smaller, more powerful, nicer, and cheaper than their predecessors. **We are very excited to offer a special $40.00 promotional discount to our customers throughout the month of April on all BACnet Router Purchases**." states Amos Vivancos Leon, Vice President at Chipkin.
